

THE WAJIR AGENDA:

WAJIR TRANSFORMATION FOR SOCIOECONOMIC PROSPERITY

2027 – 2032

MY MESSAGE TO THE PEOPLE OF WAJIR

My Brothers and Sisters,

Wajir is a county of immense potential, with resilient people, rich natural resources and boundless opportunities. Yet our potential far exceeds the opportunities available to many of our people. It is time to bridge that gap, unlock our county's wealth and build a future defined by dignity, opportunity and shared prosperity.

As we approach the 2027 General Election, we face a defining moment in our county's history. We must choose leadership that turns promises into results, challenges into opportunities, and natural wealth into better lives for every family. Together, we can transform Wajir into a new frontier of growth, innovation and development, where young people thrive, businesses flourish, pastoralism prospers and every citizen has access to quality services.

My vision is clear: to build a prosperous, united and modern Wajir that takes its rightful place in Kenya's economic transformation. Guided by this vision, I present a bold Transformation Agenda anchored in quality healthcare, a thriving livestock and agricultural economy, water security, the sustainable utilization of natural resources, expanded trade and industrialisation, investment in education and talent, and the empowerment of women, youth and vulnerable groups. At the heart of this agenda is accountable leadership and an efficient public service that delivers tangible results.

First, transform healthcare and protect every life by bringing quality, affordable and specialised medical services closer to our people. Upgrade Wajir County Referral Hospital into a centre of excellence, establish six sub-county Level 4 hospitals, and ensure that every ward has a Level 3 health centre with maternal care services. Strengthen dispensaries, expand Community Health Promoter services, recruit adequate medical personnel, and maintain reliable supplies of medicines and essential medical equipment. Embrace digital health solutions and invest in preventive care so that no family has to endure unnecessary suffering or travel hundreds of kilometres in search of treatment.

Second, turn our livestock wealth into lasting prosperity by improving cattle, goat, sheep and camel breeds; completing and operationalising our international abattoir; developing sub-regional slaughterhouses; and establishing livestock-fattening programmes that enable pastoralists to sell higher-value animals. Invest in meat processing, leather production, dairy farming, apiculture and other livestock-related enterprises. Strengthen cooperatives and market linkages so that our people capture more value from what they produce. By moving beyond the sale of live animals, we can build a competitive livestock economy that creates jobs, raises household incomes and positions Wajir as a major supplier of quality animal products.

Third, unlock our agricultural potential and strengthen food security. Put our vast land to productive use through sustainable, climate-smart farming and commercial production of food, industrial and fodder crops. Invest in dams, water pans, irrigation infrastructure and modern, water-efficient technologies. Support farmers with appropriate inputs, extension services, mechanisation, storage facilities and market access. Promote agroecological practices that protect our environment while increasing productivity. Create opportunities for young people and women in agribusiness and develop a strong agricultural value chain that generates employment, attracts

investment and contributes meaningfully to Kenya's food security.
Fourth, end the constraints imposed by water scarcity. Launch a countywide water revolution that guarantees reliable access to clean, safe water for households, livestock, agriculture and industry. Expand water harvesting, rehabilitate existing infrastructure, develop sustainable groundwater sources and modernise boreholes using appropriate treatment technologies, including reverse osmosis where necessary. Strengthen the management and maintenance of community water systems to ensure that investments deliver lasting benefits. Through these interventions, water will become a foundation for healthier communities, productive livelihoods and economic growth rather than a persistent obstacle to development.

Fifth, harness our natural resources responsibly. Protect our woodlands and biodiversity while creating sustainable economic opportunities from our natural wealth. Attract responsible investment in limestone and other mineral resources, subject to the necessary scientific assessments, environmental safeguards and national approvals. Promote value addition, resin-related enterprises, beekeeping, nature-based tourism and other viable rural industries. Exploit our abundant solar and wind resources to expand access to clean energy and attract green industries. Ensure that the benefits of resource development reach our communities through jobs, local enterprises, environmental protection and increased economic activity.

Sixth, position Wajir as a commercial gateway to Northern Kenya. Capitalise on Wajir Town's strategic location, proximity to regional markets, modernised international airport and connectivity to emerging transport and trade corridors. Improve urban and feeder roads, drainage, electricity, digital connectivity and other essential infrastructure. Establish a business-friendly environment that attracts investors, supports small and medium-sized enterprises, strengthens cross-border trade and encourages local manufacturing and processing. Work with the national government, private investors and regional partners to expand logistics, warehousing, hospitality and commercial services. Our ambition must be to build a modern, well-planned Wajir that serves as a hub for commerce, investment and regional integration.

Seventh, invest in our people and empower every citizen. Make education, skills development and talent promotion central to our transformation. Ensure every child has access to and can complete basic education, and expand pathways to technical, vocational and post-secondary training. Strengthen ICT programmes, digital literacy and continuing education for out-of-school youth. Establish sports and arts academies across our sub-counties, nurture emerging talent, and connect young people to employment, entrepreneurship and innovation. Expand economic opportunities for women, girls and persons with disabilities, and support vulnerable households in building sustainable livelihoods. Remove barriers, reward talent, and ensure no citizen is excluded from the opportunities our county creates.

Plan our county for the future. Adopt inclusive, forward-looking spatial plans to guide settlement development, transport corridors, feeder roads, drainage, sewerage, electricity and digital infrastructure. Build vibrant urban centres and orderly rural settlements that attract investment, improve service delivery and protect our environment. Strengthen public-private partnerships, support effective cooperatives and local institutions, and promote peace, unity and social cohesion. Above all, establish a government that listens to citizens, uses public resources responsibly, measures performance and delivers services with integrity.

My Brothers and Sisters,

Our transformation must be measured not by the number of promises we make, but by the difference we make in people's lives. We must build a Wajir where mothers access safe healthcare, children receive quality education, pastoralists earn better incomes, farmers find reliable markets, businesses grow, and young people can pursue their ambitions without

being forced to leave their home county in search of opportunity.

This task requires courage, discipline, partnership and a shared determination to move forward. By working with national government, development partners, the private sector and our communities, we can mobilise resources, strengthen institutions and deliver sustainable development. Peace, unity and mutual respect must remain the foundation of our progress, with the interests of Wajir placed above personal or sectional considerations.

The time to transform Wajir is now. We must seize the opportunities before us, unlock the wealth within our county, and build a future where prosperity is shared by all. Let us turn our potential into productivity, our resources into wealth, and our aspirations into measurable achievements.

Together, we can build a peaceful, prosperous and modern Wajir—a proud New Frontier for Kenya's Prosperity Agenda and a beacon of opportunity for Northern Kenya and for generations to come.

Together, let us turn possibility into prosperity. Together, let us build the Wajir we deserve. Together, let us move Wajir forward.

Hon. Hassan Wehliye Khalid

EXECUTIVE SUMMARY

This Agenda sets out a bold, integrated strategy to transform Wajir County into a resilient, inclusive, and economically vibrant region. It recognises the county's unique challenges, including an arid climate, dispersed settlements, limited infrastructure, and low human capital outcomes, and positions them as opportunities for innovation, strategic investment, and sustainable growth.

At its core is a commitment to Universal Health Coverage (UHC) through strengthened healthcare systems. This includes upgrading Wajir County Referral Hospital to a Level 5 facility, expanding specialist services, enhancing sub-county hospitals, and investing in primary healthcare and digital health systems. Mobile outreach programmes and sanitation improvements aim to ensure equitable access, particularly for underserved populations.

It also aims to transform the agriculture and livestock sectors into resilient, productive, and commercially driven engines of economic growth. Interventions focus on improving livestock productivity, restoring rangelands, developing fodder, strengthening veterinary services, and adding value. Crop production will be expanded through irrigation, drought-resilient crops, and farmer cooperatives, while alternative livelihoods such as apiculture and gum/resin production will be scaled up to diversify incomes and build climate resilience.

Water security is recognised as a critical enabler of sustainable development and prioritises integrated water resource management. This includes mapping and monitoring water sources, investing in dams and rainwater harvesting, adopting modern technologies such as reverse osmosis, and promoting efficient irrigation. These efforts aim to meet rising demand and enhance long-term water security.
This plan seeks to unlock the potential of natural resources, renewable energy, and environmental conservation. By strengthening governance frameworks, promoting solar and wind energy, supporting green enterprises, and enabling responsible mineral development, the county aims to create jobs while protecting ecosystems.

To drive economic growth, this plan focuses on trade, industry, and cooperative development, leveraging Wajir's strategic location within regional trade networks. Investments in infrastructure, market systems, industrial zones, and logistics, particularly around Wajir International Airport, will position the county as a key commercial hub in Northern Kenya.

Human capital development is a central pillar, underpinned by targeted investments in education, youth empowerment, and skills development. The plan addresses low literacy rates by expanding access to education, supporting teachers, expanding vocational training, and promoting digital learning. Talent development in sports, arts, and innovation will create alternative pathways for youth engagement and employment.

The document underscores the importance of equity and social inclusion, particularly for women, youth, and vulnerable groups. It commits to tackling gender-based violence, promoting women's economic empowerment, expanding social protection systems, and ensuring no one is left behind in development.
In response to unplanned settlement growth, the Agenda sets out a structured approach to land use, urban planning, and settlement development. By strengthening urban centres, improving infrastructure, and implementing spatial planning frameworks, the county aims to improve service delivery, economic activity, and environmental sustainability.

A forward-looking approach to infrastructure and transport development will prioritise climate-resilient roads, feeder networks, digital connectivity, and sustainable construction practices. These investments will improve mobility, trade, and access to services across the county.
To support these ambitions, the county commits to strengthening its fiscal space by improving revenue mobilisation, expenditure efficiency, and financial discipline. Addressing the high wage bill, clearing outstanding bills, and strengthening accountability will be key to ensuring sustainable development financing.

Finally, the plan focuses on public-sector transformation and digital governance. By digitising services, enhancing transparency, building institutional capacity, and fostering partnerships, the county aims to deliver efficient, citizen-centred services. However, with only about 2% of residents using computers, accelerating digital literacy and access will be critical to realising the full benefits of this transformation.

This Agenda therefore provides a comprehensive roadmap for Wajir County to achieve sustainable development by integrating economic growth, social inclusion, environmental stewardship, and institutional reforms.

1·0

Health Care Services

The devolved health system's architecture was designed to improve efficiency, equity, and access to quality universal health services at the grassroots level. Broadly, the County-level function of the health system is to provide primary and mid-level specialised health services. To fulfil this mandate, establishing a County Health Development Plan (CHDP), supported by appropriate health infrastructure, personnel, and adequate pharmaceuticals and non-pharmaceutical supplies, remains critical. The CHDP must be all-inclusive, bringing public, faith-based, and private investment in the health sector toward a common perspective.

Wajir's healthcare includes public, private, and faith-based facilities. According to KMPDC's current records, the County has 273 registered and licensed health facilities: 178 owned by the County Government, 93 by private investors, and 2 by faith-based organisations. The County Government has one level V, twelve (12) level IV, forty (40) level III, and one hundred and twenty-five (125) level II health facilities. In addition, the County has 132 community health units, 84% of which are functional.

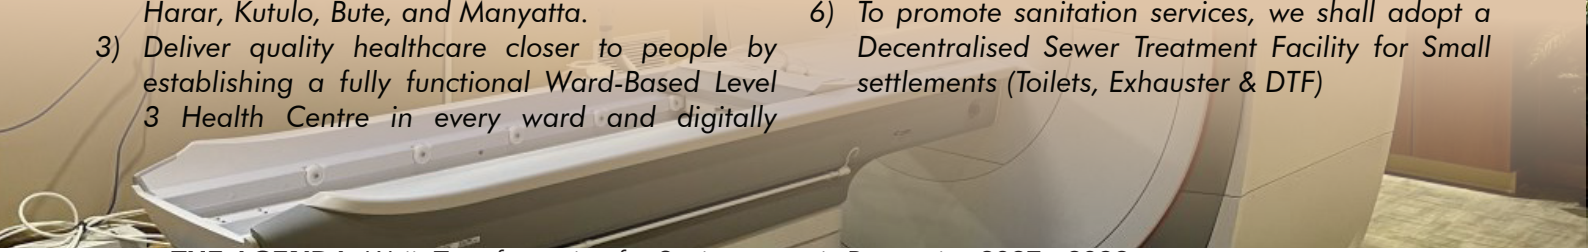

Although the County has made some efforts to improve general health care, glaring gaps remain, particularly in the public health system. Access to public health care remains a major challenge for our County due to the region's vast geography, limited infrastructure, and frequent shortages of medical personnel and supplies. This scenario calls for more creative, deliberate, and ambitious use of our substantial healthcare resources to address both old and emerging health challenges. In particular, the lack of adequate specialised services at our referral hospital has caused our people significant pain.

The people of Wajir deserve a healthcare system that works. That is why my administration will immediately review the condition of our health facilities, roll out a Rapid Results Initiative to address medicine shortages and malfunctioning equipment, and modernise our health services to provide quality, accessible care for all.

OUR GOVERNMENT'S COMMITMENT

We are committed and determined to realise the constitutional right to health in the shortest time possible by delivering a Universal Health Coverage (UHC) system built on the following pillars as follows:

1) *Transform Wajir County Referral Level 5 Hospital into a fully equipped regional centre of excellence for specialised healthcare by expanding critical medical infrastructure and services, including cancer treatment, kidney care, eye care, intensive care, advanced surgical theatres, and other specialised treatment units.*
2) *Upgrade strategic Level 4 hospitals across Wajir County to satellite centres for specialised healthcare, providing services including dialysis, cancer diagnosis and screening, and comprehensive dental care. Priority facilities include Habaswein, Griftu, Tarbaj, Abakore, Leheley, Eldas, Khorof-Harar, Kutulo, Bute, and Manyatta.*
3) *Deliver quality healthcare closer to people by establishing a fully functional Ward-Based Level 3 Health Centre in every ward and digitally connecting Community Health Promoters to these facilities, thereby creating an efficient, responsive, and people-centred primary healthcare system.*
4) *Bring quality healthcare closer to every family through a robust Mobile Mother & Child Health Outreach Programme that delivers maternal and child health services, vaccinations, nutrition interventions, antenatal and postnatal care, specialised clinics, and diagnostic services directly to communities across Wajir County.*
5) *Build a smart, digitally connected healthcare system for Wajir County by establishing an Integrated County Health Information Platform that links all health facilities, streamlines the management of health workers and medical supplies, supports telemedicine services, coordinates ambulance and referral networks, and improves the quality and efficiency of healthcare delivery.*
6) *To promote sanitation services, we shall adopt a Decentralised Sewer Treatment Facility for Small settlements (Toilets, Exhauster & DTF)*

2·0

Livestock Economy

Kenya's livestock sub-sector is a cornerstone of the national economy, contributing 42% of agricultural GDP, 12% of national GDP, and 30% of total agricultural output. It encompasses the production of meat, milk, hides and skins, wool, eggs, and other livestock products, and supports emerging enterprises such as apiculture and wild bird farming. Within this sector, Wajir County is one of Kenya's leading livestock hubs. According to the State Department of Livestock Development (2025), the county is home to approximately 0.8 million cattle, 2.3 million sheep, 3.2 million goats, over 180,000 donkeys, and 1.2 million camels.

Livestock remains the backbone of Wajir's economy and way of life. It sustains more than 102,000 households, representing nearly 80% of the county's population, and contributes an estimated 70% to household income and food security in normal seasons. For generations, pastoralism has provided livelihoods, built resilience, and supported the county's social and economic fabric.

Despite this potential, the sector faces persistent challenges, including recurring droughts, rangeland degradation, low genetic potential in livestock breeds, inadequate veterinary services, and weak market systems. As a result, many livestock keepers remain trapped in poverty despite owning substantial herds.

To unlock this resource's full value, Wajir must shift from traditional subsistence pastoralism to a modern, competitive Livestock Economy. This transformation will focus on commercialisation, value addition, improved breeding, animal health services, market integration, and climate-resilient production systems, enabling livestock to become a powerful engine of wealth creation, employment, and sustainable economic growth for the county.

OUR GOVERNMENT'S COMMITMENT

To realise the full potential of livestock production, my administration is committed to:

1) *Establish the **County Animal Diagnostic Centre** with strategic satellite cold chain facilities in all sub-Counties to support scheduled vector and disease surveillance, regular, timely livestock vaccination and dip programmes.*
2) *Develop and implement a **County Livestock Breed Improvement Programme** through a Community/ Cooperative based initiatives such as Bull/ Buck scheme and subsidised AI services for cattle, sheep, goats and camels.*
3) *Implement a **Cooperative-Based Feed Security Programme** that will guarantee year-round livestock feed availability through commercial-scale fodder production, feed bulking, conservation, storage and processing of nutrient-rich concentrates.*
4) *Roll out a **County Livestock Fattening Programme** that leverages cooperatives, community organisations and private-sector investment to transform livestock rearing into a profitable commercial enterprise.*
5) *Initiate a **County Dairy Revitalisation Programme** that will boost milk production (for cow, goat & camel), improve dairy breeds, guarantee milk quality, and create wealth through modern aggregation, processing and value-addition enterprises.*
6) *Create a **County Livestock Investment Company** to oversee the operation, commercialisation and sustainable management of the Wajir International Abattoir and public slaughterhouses across the county.*
7) *Establish a **Poultry Enterprise Development Programme** to scale up improved indigenous chicken production, value addition and access to competitive markets, with a special focus on women's empowerment*

3·0

Agriculture and Alternative Livelihood

Wajir County covers 56,773.1 km² and lies within Kenya's arid and semi-arid lands. Yet beneath this harsh climate lies immense agricultural potential. Approximately 5,134.45 km², about 9% of the County's land area, is suitable for cultivation. However, only 3,120 hectares, or 0.6% of the arable land, are currently under food crop cultivation. This stark gap between potential and utilisation presents one of the greatest opportunities to transform Wajir's economy, strengthen household food security, and reduce poverty.

Wajir's agricultural future lies in turning our vast unutilised arable land into productive farms that feed our families, supply local markets, and generate community income. Through strategic investment in water harvesting, irrigation schemes, farmer training, and agricultural value chains, we will transform agriculture from a subsistence activity into a thriving commercial enterprise that contributes meaningfully to the County's socio-economic transformation.

Alternative livelihoods such as apiculture and gum and resin production offer significant opportunities to diversify incomes and strengthen resilience among Wajir's communities. The County's arid and semi-arid environment is particularly well suited for beekeeping and gum and resin production, yet these sectors remain largely underdeveloped. Currently, around 500 beekeepers in Bute, Tarbaj, and Habaswein produce an estimated 31 metric tonnes of honey and 50 metric tonnes of gums and resins annually, demonstrating these value chains' potential to generate sustainable household incomes.

OUR GOVERNMENT'S COMMITMENT

To realise the full potential of agriculture, apiculture and resin, my administration is committed to:

1) *Facilitate the establishment of commercial fruit tree farms through farmer cooperative societies and private-sector investment to unlock Wajir's agricultural potential, enhance food security, and create sustainable livelihoods.*
2) *Promote the Drought-Resilient Cereals and Pulses Programme through seed bulking, conservation of indigenous seed varieties, and enhanced storage and preservation systems to strengthen food security and climate resilience.*
3) *Champion the African Indigenous Vegetables Programme to ensure every household has access to nutritious foods, creating healthier communities while diversifying agricultural livelihoods and incomes.*
4) *Invest in modern aggregation, storage, and cold chain systems to improve post-harvest management, support value chains, and increase the market competitiveness of agricultural produce.*
5) *Advance the Integrated Soil and Dryland Management Programme through sustainable soil fertility improvement, water conservation measures, and ecosystem restoration to boost productivity and resilience in arid and semi-arid areas.*
6) *Establish an Apiculture Enterprise Development Programme to modernise beekeeping across Wajir County by promoting improved apiculture technologies, training local fabricators of beekeeping equipment, and establishing model apiaries in every ward. The programme will progressively support the development of aggregation centres linked to the CAIP Honey Processing, Value Addition and Branding Factory, while strengthening market access and value-chain integration, with a deliberate focus on empowering women and youth entrepreneurs.*
7) *Roll out the Gum and Resin Enterprise Development Programme to scale up production, sustainable harvesting, and value addition, driving job creation, higher incomes, and a more resilient local economy beyond livestock.*

4·0

Water Resources

Wajir is a semi-arid region with a hot climate. The annual average temperature is 27.9 °C, humidity is around 62%, and mean annual rainfall is around 270 mm (based on NOAA Arc-2 daily precipitation data, 1983 – 2013). Higher areas of Bute and Gurar in the north, and the south-eastern areas near Somalia, receive around 350 mm of rainfall. June to August are the driest months, with little to no rainfall, while April is the wettest month, averaging 85 mm.

The main aquifer in Wajir County is the Merti aquifer, with the Ewa so Ng'iro River as the major (seasonal) drainage system that recharges the groundwater. The aquifer fringes extend up to 70 km into Wajir County but are limited by adjacent saline water bodies. The aquifer has an estimated stored water volume of approximately 84 billion m^3. Studies suggest the Merti aquifer's total annual recharge is around 5 Mm^3 (EWL, 2013; Vreugdenhil, 2013).
Water pans and boreholes are the county's primary water sources. Livestock accounts for the largest share of water use (53%), followed by domestic consumption (30%). However, water demand in Wajir County is rising as the economy shifts from pastoralism to agropastoralism. Additionally, new pastoralist settlements have increased domestic water demand, particularly in villages, towns, and major centres.

With Wajir's expected annual population growth rate of 3%, water demand is projected to increase by more than 35% over the next 10 years. However, improving the water supply to meet national standards, providing 20 litres per person per day within a 1 km radius, will require a substantial increase of up to 440%.

Given the increase in water demand, the focus should shift to strategic planning and targeting areas where financial resources yield the greatest increase in water access.

OUR GOVERNMENT'S COMMITMENT

To realise the full potential of water resources and sustainably recharge and utilise water, we are committed to:

1) *Revitalise and modernise the Wajir Water and Sewerage Company to guarantee reliable, adequate, and sustainable water supply for all residents of Wajir Town and every settlement centre across the county.*
2) *Establish a countywide digital water resources database through the mapping, geo-referencing, and coding of all water pans, shallow wells, and boreholes to strengthen water security, improve resource management, and support long-term sustainability.*
3) *Invest in reverse osmosis technology to unlock saline groundwater resources and roll out digital water kiosks that guarantee efficient, transparent, and equitable access to clean water.*
4) *Mobilise private sector investment through Public-Private Partnerships (PPPs) to develop large-scale dams and water pans that support domestic water supply, livestock production, and climate-smart agriculture.*
5) *Scale up household and community rainwater harvesting initiatives through water pans, farm ponds, and stormwater management infrastructure, complemented by modern water-saving irrigation systems to enhance water security and food production.*
6) *Protect, rehabilitate, and sustainably manage critical water catchments and ecosystems, including hills, woodlands, wetlands, aquifers, and Lake Yahud, to strengthen water security, biodiversity conservation, and climate resilience.*

Environment, Natural Resources, and Energy

Wajir County's economy, while predominantly anchored in livestock production, also relies heavily on its diverse natural resource base. Although the County has no gazetted forest, it accounts for 1.9% of Kenya's 6.99% woodland cover, consisting mainly of woody trees and shrubs that support grazing by domestic livestock and wildlife.

The County is home to a variety of wildlife, including ostriches, hyenas, gazelles, lions, zebras, giraffes, warthogs, snakes, and numerous bird species, underscoring its ecological richness. Beyond wildlife, Wajir's woodlands supply a wide range of forest products, including gum, resin, charcoal, firewood, posts, bark, honey, woodcarving materials, and wild fruits.

Among these, gum and resin stand out as high-value commodities, commanding strong demand in both national and international markets. Their commercial potential makes them strategic natural products that can diversify household incomes and strengthen the County's broader economic resilience.

Wajir County's geology, beyond its significant groundwater reserves, is characterised by extensive sedimentary formations that define the region's low-lying basin. These formations are dominated by limestone, sandstone, gypsum, and clay, providing a solid foundation for construction materials and related industries. The county also hosts small-scale mineral prospects, including beryl and mica. Notably, the Critical Minerals Catalogue of Kenya identifies Wajir as one of the areas with uranium-bearing deposits, underscoring its emerging strategic importance in the national minerals landscape.

This geological potential offers Wajir a timely opportunity to position itself as a frontier for responsible mineral development. Realising these benefits will require deliberate partnerships with the National Government, particularly in geological mapping, licensing, and regulatory oversight, as well as collaboration with private-sector investors to unlock exploration, value addition, and local economic opportunities. With the right frameworks, Wajir can convert its mineral endowment into sustainable growth, employment, and county revenue.

Wajir County has substantial untapped potential for wind and solar energy generation, offering a viable pathway to electrify communities not connected to the national grid. With about 300 sunny days each year and favourable wind conditions across its open landscapes, the County is well positioned to expand access to renewable energy. Scaling these technologies would reduce reliance on wood harvesting for household fuel, thereby mitigating environmental degradation. However, widespread adoption will depend on affordability for households and institutions, as well as the availability of local technical skills for installation, operation, and maintenance.

OUR GOVERNMENT COMMITMENT

To strategically prepare the County to participate in the sustainable use and conservation of natural resources and to accelerate the adoption of renewable energy as a driver of new economic opportunities, we are committed to undertaking the following interventions:

1) *Establish a County Policy Framework for natural resource governance and management that strengthens the governance foundation for investment by advancing policy reforms across land, minerals, water, and rangeland management, thereby creating the predictability and accountability required for long-term engagement with communities, investors, and development partners.*
2) *Promote the Green Jobs and Nature-Based Enterprise Frontier by nurturing opportunities in eco-tourism, beekeeping, gum Arabic, aloe processing, recycling, and bioenergy, with a primary focus on job creation for youth and women while protecting ecosystems.*
3) *Leverage private-sector partnerships to unlock investment in mineral exploitation and to establish construction materials industries, opening new pathways for economic growth and sustainable livelihoods in the county.*
4) *Enhance promotion of solar and wind energy adoption across households, institutions, and small businesses, while creating incentives for private investment in mini grids, cold storage, and clean cooking.*
5) *Establish a Natural Resources Innovation Hub that harnesses digital and data technologies to enhance early warning systems and strengthen monitoring of conservation, reclamation, deforestation, and poaching.*
6) *Promote a Climate Smart Livestock and Agrifood Economy centred on woodland and rangeland restoration, fodder production, and enhanced disease surveillance to strengthen pastoral livelihoods and stabilise the county's food systems.*

6·0

Trade, Industry, and Cooperative Development

Northeastern Kenya's economy is driven by a dynamic cross-border livestock system, with an estimated 60% of the region's livestock entering the country through trade with Somalia and Ethiopia. This informal yet highly efficient market network sustains pastoral livelihoods, anchors commerce in hubs such as Wajir, Garissa, and Mandera, and supplies major Kenyan consumption centres, including Nairobi, Mombasa, and Kiambu.

Wajir town occupies a uniquely strategic position in Northern Kenya, serving as a central commercial, administrative, and transport hub. Its near-equidistant location from major northern urban centres Mandera, Garissa, Isiolo, and Moyale (approximately 250–350 km away) gives it a natural advantage for inter-county trade, mobility, and service delivery. This geographic balance, together with its transport infrastructure and administrative role, makes Wajir a critical anchor for economic activity and regional coordination across the north.
Wajir Town anchors a growing logistics ecosystem centred on the Wajir International Airport, which links Northern Kenya to Nairobi, Mogadishu, and Ethiopia and supports both commercial and military operations. Its location within the LAPSSET Corridor positions Wajir as a future gateway for cross-border trade, with the upgrading of the Wajir-Isiolo road expected to unlock new investment opportunities in transport, livestock markets, and regional commerce. Persistent challenges—particularly those linked to the semi-arid climate and infrastructure stress—continue to affect reliability, but targeted public and donor investments are steadily improving road quality, supply chain efficiency, and the region's overall economic competitiveness.

OUR GOVERNMENT'S COMMITMENT

To strategically prepare the County to exploit and participate in emerging trade and industrial opportunities, my government is committed to undertaking the following interventions:

1) *Establish and operationalise the* **Wajir Industrial Development Agency** *as a one-stop investment and industrialisation institution to attract capital, facilitate trade, promote enterprise development, and position Wajir as the economic gateway to Northern Kenya and the Horn of Africa.*
2) *Establish a County MSME Growth and Enterprise Development Programme to strengthen entrepreneurial capacity, facilitate business formalisation, expand digital market access, and improve access to finance, credit, and investment opportunities.*
3) *Strengthen local trade ecosystems through the expansion and modernisation of food markets, livestock yards, and related trading infrastructure to improve market access and increase producer incomes.*
4) *Strengthen transport and market infrastructure through continued upgrading of key corridors, including the Wajir–Isiolo and Wajir–Mandera roads, the Wajir-Moyale and Wajir-Somalia roads, the expansion of market sheds, and the improvement of last-mile access roads to production zones.*
5) *Facilitate the operations of Wajir International Airport by supporting complementary infrastructure, increasing cargo-handling capacity, and fostering partnerships that position the airport as a regional logistics hub.*
6) *Enhance policy, planning, and investment coordination through multi-stakeholder platforms, public–private partnerships, and alignment with national initiatives such as LAPSSET*

7·0

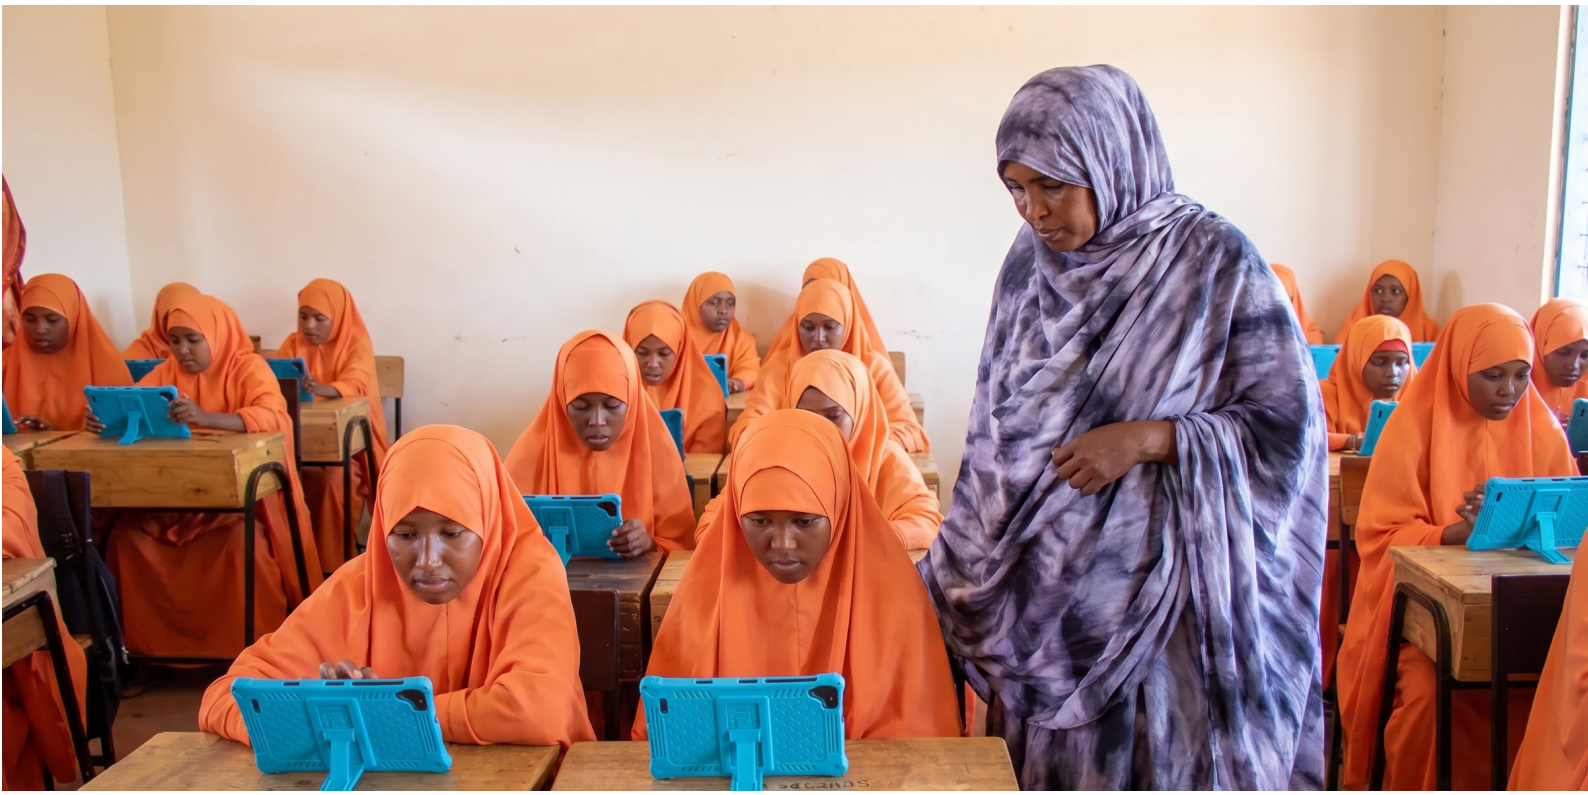

Education, Youth, Arts, and Sports

Wajir County had a population of 781,263 in the 2019 Census, and the population continues to rise rapidly, with an annual growth rate of 3.7%. The population is predominantly young and slightly male-skewed, with 53% male and 47% female. This youthful demographic presents a significant opportunity for economic and social transformation, especially as new livelihoods, climate-smart initiatives, and digital opportunities emerge across the country.

However, this young population's ability to fully participate in development remains constrained by low literacy levels, limited training pathways, and inadequate opportunities for educational advancement. While Kenya's national adult literacy rate stands at approximately 82.9%, reflecting substantial progress in access to education and youth learning outcomes, Wajir County's literacy rate is markedly lower at 47%. The challenge is even more pronounced among young women, whose literacy rate is 36.8%, underscoring persistent gender disparities in access to education and skills development.

These gaps continue to constrain the county's ability to harness its demographic dividend. Despite 370 ECDE centres, 320 primary schools, 191 junior secondary schools, 69 senior secondary schools, and only 5 TVET institutions, the current education ecosystem remains insufficient to meet the needs of a rapidly growing, youthful population. Expanding foundational literacy, strengthening skills development systems, and improving equitable access to education—particularly for girls and young women—are essential to unlocking inclusive growth and enabling youth to play a meaningful role in Wajir's development trajectory.

In addition to addressing literacy and skills gaps, Wajir County will prioritise identifying, searching for, and developing talent among children and young people. Nurturing talent early creates new pathways to opportunity, broadens aspirations, and helps young people discover strengths beyond formal education. This approach is especially important in contexts where many young people are out of school or undertrained, as it provides meaningful engagement, builds confidence, and connects young people to constructive social networks. By investing in talent development, whether in sports, arts, innovation, leadership, or vocational skills, the County can open new horizons for the next generation while reducing vulnerability to social risks and negative coping behaviours.

OUR GOVERNMENT'S COMMITMENT

To raise literacy levels, close skill gaps, and develop the talents of young people in Wajir, my government is committed to undertaking the following priority actions:

1) *Expand access to quality ECDE services by investing in school infrastructure, strengthening teaching and learning resources, enhancing play facilities, supporting nutrition programmes, and upgrading ECDE teachers' capacity.*
2) *Introduce the mobile ECDE programme embedded within pastoral communities during relocations.*
3) *Enhance social interventions to basic education through support to school feeding programmes, girls' sanitary support programmes, bursary/ scholarship programmes, and infrastructure development programmes,*
4) *Support adult and continuing education for youth outside school and adults through continuing community-based learning initiatives and e-learning.*
5) *Invest in vocational and technical skills development by expanding TVET institutions, mobile training units, and short-course programmes aligned with local economic opportunities, including livestock value chains, climate-smart agriculture, digital skills, and small enterprise development.*
6) *Establish a Women in Technical Skills Scholarship Programme to provide targeted scholarships, mentorship, and industry-linked training for girls and women in technical and vocational fields, increasing female participation in skilled trades, technology, engineering, and emerging economic sectors.*
7) *Establish the Wajir Talent and Excellence Academy, headquartered at Wajir Stadium and supported by satellite centres in all 15 sub-counties, to create a structured countywide system for talent identification, nurturing, and advancement in sport and the arts.*
8) *Establish Digital Innovation Hubs in all 15 sub-counties to equip young people with digital skills, foster innovation and entrepreneurship, and support youth-led enterprises, community service, and livelihood incubation programmes, thereby creating pathways to employment and reducing vulnerability to social and economic risks.*

8·0

Gender, Culture and Social Services

Development can only be sustainable if it is equitable. For this reason, combating inequalities and eliminating all forms of discrimination must be at the forefront of our country's efforts to advance Sustainable Development. A society cannot progress when large segments of its population are excluded from opportunity, voice, and dignity. Equity is therefore not only a moral imperative but also a strategic investment in long-term stability, productivity, and resilience.

For our County, "Living no One Behind" is a call for deliberate action to expand access to education, health, skills, and economic opportunities, especially for groups historically marginalised, such as women, girls, and PWDs. It also demands that our institutions, policies, and programmes actively dismantle barriers that perpetuate exclusion.

"It is only by embedding equity at the centre of our development agenda that we can build a county that is prosperous, cohesive, and sustainable for generations to come"

Women in Wajir County continue to face profound gender inequalities rooted in deeply entrenched patriarchal norms. These norms manifest as high levels of Gender-Based Violence (GBV), limited political representation, and persistent barriers to education and economic empowerment. Official reports indicate that 3 in every 10 women in Wajir have experienced sexual violence, with 115 cases documented in 2024, underscoring the scale and urgency of the crisis.

Despite these challenges, women shoulder a significant share of household responsibilities. Approximately 46.1% of households in Wajir are headed by women, among the highest rates nationally. Yet their leadership and decision-making power remain constrained. Under systems such as negotiated democracy, women's political participation and influence remain limited, reinforcing cycles of exclusion and weakening the country's ability to benefit from women's leadership, knowledge, and contributions.

The County also remains among the regions with the highest prevalence of Female Genital Mutilation (FGM) and of early or forced marriages, practices that severely undermine the health, dignity, and prospects of girls and women. Environmental hardships further compound these vulnerabilities: women and girls often travel long distances to collect water, exposing them to additional risks of violence and limiting their time for education, income-generating activities, and rest.

These realities underscore the need for deliberate, gender-responsive interventions to dismantle discriminatory norms, expand women's access to education and economic opportunities, strengthen protective systems, and ensure women's meaningful participation in governance and community decision-making.

OUR GOVERNMENT'S COMMITMENT

To strategically prepare our County to realise its commitment to Leaving-No-One-Behind, my government is committed to undertaking the following interventions:

1) *Launch the Wajir Gender Empowerment Fund to unlock entrepreneurship, expand economic opportunities, and strengthen financial inclusion for women, youth, and persons with disabilities through accessible financing, enterprise development, and market-access support.*
2) *Establishment of a County GBV referral centre, supported by Sub-County satellite centres: Protecting the Most Vulnerable by enhancing social protection systems, disability inclusion, and shock-responsive safety nets for drought-affected households.*
3) *Expanding Livelihoods and Economic Inclusion through supporting pastoralist value chains, MSMEs, agribusiness, and alternative livelihoods that create jobs and reduce dependency.*

9·0

Land, Settlements, and Urban Development

The way we plan, use, and govern our land determines the horizons our people can reach. Well-designed human settlements and inclusive urban development are not merely technical exercises but nation-shaping choices. When we organise our spaces with intention, we unlock opportunity, strengthen resilience, and create environments where every young person, every woman, and every family can thrive.

Land and urban systems underpin economic opportunity, social inclusion, and sustainable growth. They affect how easily a child can reach school, how safely a woman can access markets, how confidently a young entrepreneur can start a business, and how well communities withstand climate shocks. By shaping our land, we shape our future — our productivity, cohesion, and shared prosperity.
This perspective signals a bold, forward-looking agenda, where:

Land use is an engine of economic mobility; Human settlements are platforms for dignity and equity; Urban systems are catalysts for innovation and resilience

It positions land and urban planning as transformative tools, not administrative routines, capable of redefining how communities grow, how young people find opportunities, and how counties such as Wajir build a more inclusive, prosperous future.

Wajir County is experiencing a rapid, largely uncoordinated proliferation of small, family- and sub-clan-based settlements. Current estimates indicate 1,096 dispersed settlements across 266 sub-locations, a level of spatial fragmentation that is neither economically viable nor aligned with sustainable land management practices. These emerging settlements are driven not by population growth, urbanisation pressures, or service demand, but by social dynamics and informal land subdivision. As a result, they lack the density, economic activity, and functional systems required to evolve into viable urban centres. The trend undermines efficient resource allocation, weakens service delivery, and threatens the integrity of rangelands and pastoral mobility corridors.

Despite this fragmentation, Wajir has a clear and emerging urban backbone comprising four major urban centres (Wajir, Habaswein, Griftu & Tarbaj) and eight fast-developing centres (Eldas, Kutulo, Khorof-Harar, Bute, Bune, Hadado, Diff & Wajir-Bor), which collectively anchor administration, commerce, and service delivery. With the urban population now at 23% and steadily rising, these centres offer the most strategic opportunity to create economically vibrant, service-efficient, and socially inclusive urban nodes.

OUR GOVERNMENT'S COMMITMENT

To address the growing mismatch between settlement patterns and service delivery capacity, and to enhance the quality and competitiveness of Wajir's viable urban centres, our government commits to the following actions:

1) *Develop and implement a County Spatial Plan (CSP); establish a countywide spatial framework to guide land use, settlement growth, infrastructure investment, and environmental management. Define clear urban hierarchies and growth corridors to direct development towards viable centres.*
2) *Prepare Local Physical and Land Use Development Plans; prioritise detailed planning for the four major urban centres and the six fast-growing towns. Introduce zoning, development control guidelines, and land-use regulations to support orderly, inclusive, and climate-resilient growth.*
3) *Rationalise and consolidate fragmented settlements; undertake a structured assessment of the 1,096 dispersed settlements to identify those suitable for consolidation, upgrading, or phased integration into planned service nodes. Protect rangelands, grazing reserves, and pastoral mobility corridors from encroachment by unplanned settlements.*
4) *Strengthen urban infrastructure and basic services; invest in water, sanitation, roads, drainage, solid waste management, and public amenities in designated urban centres to enhance their attractiveness and economic viability.*
5) *Establish a County Urban Development and Management Framework; operationalise urban boards and strengthen municipal management capacities in line with the Urban Areas and Cities Act. Introduce transparent land governance systems, including land banking, tenure regularisation, and development control mechanisms.*
6) *Promote Economic Clustering and Urban Livelihood Opportunities; support the development of markets, logistics hubs, SME zones, and vocational training facilities in key urban centres. Align urban development with youth employment, innovation, and value-chain growth.*

Infrastructure and Transport Development

A future-ready infrastructure agenda must go beyond building new roads to developing smarter, greener, and more resilient systems that sustain economic growth while safeguarding communities and the environment. This requires integrating climate-resilient design—such as elevated roadways, improved drainage, and materials that withstand extreme weather—with sustainable, low-carbon approaches that reduce long-term maintenance costs.

Equally essential is expanding digital and communications infrastructure, including high-speed internet backbones, last-mile connectivity, and reliable communication networks that enable education, commerce, emergency response, and inclusive development. By treating physical and digital infrastructure as interconnected pillars, our governments can build adaptive, efficient, and future-proof networks that strengthen livelihoods and unlock new opportunities for all.

As Wajir County positions itself to develop a sustainable, future-oriented infrastructure and transport system, it must prioritise upgrading and securing its primary trunk roads linking the county to Garissa, Isiolo, Moyale, and Mandera—critical corridors for trade, mobility, and regional integration. At the same time, the emerging six urban centres (Eldas, Bute, Bune, Hadado, Diff & Wajir-Bor) require well-planned feeder and tributary roads to ensure balanced growth, efficient service delivery, and equitable access to opportunities.

By strategically leveraging its abundant natural construction materials—such as murram, ballast, and other locally available aggregates—the county can significantly reduce infrastructure development costs, accelerate project delivery, and stimulate local enterprise. This integrated approach positions Wajir to build resilient, climate-smart, and economically catalytic infrastructure networks that support long-term prosperity.

OUR GOVERNMENT'S COMMITMENT

In advancing a sustainable future for infrastructure and transport development in Wajir County, our government commits to implementing the following priority interventions.

1) *Prioritise the development and ongoing maintenance of feeder roads serving the six emerging urban centres to foster balanced growth, improve service delivery, and strengthen vital rural-urban linkages.*
2) *Establish a countywide integrated drainage and stormwater management system that deploys modern solutions in flood-prone areas—including culverts, retention basins, and nature-based interventions—to reduce road washouts, protect settlements, and improve water harvesting.*
3) *Strengthen routine maintenance systems by institutionalising a predictable, well-funded programme for the upkeep of roads and other public infrastructure—such as streetlights and digital installations—through community-based approaches and modern monitoring tools to extend the lifespan and improve the reliability of county assets.*
4) *Create incentives for private-sector investment to expand digital and communications infrastructure, including high-speed internet backbones, communication towers, and last-mile connectivity, to ensure that all urban centres, schools, health facilities, and business hubs are fully digitally connected.*
5) *Leverage locally available construction materials through regulated, sustainable extraction to reduce infrastructure development costs, stimulate local enterprise, and expand job opportunities for young people.*

11·0

Accountability and Fiscal Discipline

Wajir County's fiscal space remains severely constrained, marked by heavy reliance on national government transfers and persistently low Own Source Revenue. The county's wage bill, estimated at 40.5% to 42.6% of total revenue, continues to exceed the 35% ceiling set by the Public Finance Management Act, thereby limiting resources available for development spending.

Despite receiving approximately KShs 94.16 billion in cumulative devolution allocations since 2013/14, Own Source Revenue accounts for less than 1.5% of total county revenue, indicating a narrow and underperforming local revenue base. The fiscal situation is further strained by escalating pending bills, currently estimated at KShs 5.5 billion, and unremitted statutory deductions of KShs 1.5 billion, both of which pose significant risks to service delivery, supplier confidence, and overall financial sustainability.

My administration will uphold the highest standards of accountability, transparency, and prudent financial management to ensure every public resource delivers maximum value to the public. We will strengthen public financial management systems, enforce strict expenditure controls, improve revenue collection efficiency, and promote evidence-based budgeting that aligns county spending with development priorities. Through transparent procurement, regular financial reporting, and enhanced oversight, we will safeguard public funds and restore public confidence in government institutions.

To foster a culture of responsibility and integrity, we will strengthen internal audit functions, enforce compliance with financial regulations, and adopt digital systems that enhance transparency, efficiency, and traceability in resource utilisation. We will also promote citizen participation in planning, budgeting, and monitoring public projects to ensure government remains accountable to the people it serves. By entrenching fiscal discipline and responsible governance, we will create a financially sustainable county capable of delivering quality services, accelerating development, and securing prosperity for future generations.

OUR GOVERNMENT'S COMMITMENT

To cultivate a sustainable and healthy fiscal space and reverse the current trajectory in Wajir County, my government is committed to undertaking the following measures:

1) *We shall place citizens at the centre of financial decision-making by establishing a **County Budget and Economic Council** to guide development priorities, strengthen accountability in public spending, monitor project delivery, and ensure that every county investment delivers tangible improvements to livelihoods, services, and economic opportunities.*
2) *We shall transform county revenue generation by deploying the **County Integrated Digital Revenue System,** sealing revenue leakages, expanding revenue sources, and strengthening taxpayer compliance, thereby substantially increasing Own Source Revenue, reducing overreliance on external funding, and sustainably financing priority development programmes and service delivery.*
3) *We shall institutionalise **Programme-Based Budgeting** and enforce a strict procurement-to-budget linkage to ensure that all expenditure and procurement activities are aligned with approved programmes, development priorities, and measurable service delivery outcomes.*
4) *We will digitise and automate the entire county procurement cycle via the **Electronic Government Procurement** (e-GP) System, ensuring transparent, efficient, and corruption-free procurement, expanding equitable access to business opportunities, and maximising value for every public shilling spent.*
5) *Address structural pressures, including the **wage bill and pending bills**, by enforcing the legal wage bill ceiling through payroll audits and workforce optimisation, and by implementing a credible, phased plan to clear verified arrears and prevent future accumulation. Regularising statutory deductions and strengthening cash flow management are also central to restoring financial discipline and rebuilding trust with employees, suppliers, and oversight institutions.*
6) *We will institutionalise robust internal audit and financial controls to safeguard public resources, prevent financial irregularities, strengthen oversight, and ensure transparency, accountability, and prudent management of every public shilling.*

12·0

County Public Sector Services Delivery

Pursuing excellence in public-sector service delivery requires a deliberate shift from traditional bureaucratic practices to more citizen-centred, efficient, and results-oriented approaches. It entails leveraging technology, strengthening staff professionalism, and applying data-driven decision-making to deliver high-quality public value. Achieving this excellence also depends on establishing clear performance indicators, fostering a culture of innovation, and reinforcing accountability across all levels of government.

This pursuit requires sustained investment in digital infrastructure, innovation, and skills development for employees and the public. These efforts are expected to yield substantial gains, including broader access to government services, improved quality and efficiency, enhanced connectivity in rural areas, expanded employment opportunities for young people, and the emergence of a vibrant digital economy.

To enhance transparency, strengthen citizen engagement, and project a more credible and responsive image of the government, strengthening government communication and rebranding are imperative. This will be achieved by establishing a County Communication Unit equipped with high-quality audiovisual tools, skilled personnel, an active social media team, and community monitors.

Recognising that development partners play a critical role in accelerating the country's development by complementing government efforts through technical expertise, financial resources, and targeted interventions across key sectors, fostering strategic partnerships, aligning their investments with county priorities, and promoting innovation and accountability, development partners will help bridge historical infrastructure gaps, build local resilience, and advance inclusive, sustainable development for the people of Wajir.

OUR GOVERNMENT'S COMMITMENT

To pursue excellence in public sector service, our government is committed to undertaking the following measures:

1) *Establish and strengthen the Governor's Delivery Unit as a central performance management and coordination mechanism to monitor flagship projects, track county development targets, conduct quarterly performance reviews, and ensure the timely delivery of priority programmes across all sectors.*
2) *Establish and operationalise an integrated County Performance Management and Delivery Framework that links planning, budgeting, implementation, monitoring, and reporting to measurable outcomes, performance scorecards, and quarterly accountability reviews, thereby driving effective implementation of the Wajir Transformation Agenda.*
3) *Develop and deploy a county-wide digital workforce management platform to monitor staff deployment, attendance, performance, and capacity development across all departments, ensuring a productive, accountable, and results-driven public service.*
4) *Institutionalise participatory governance through structured citizen engagement platforms, robust feedback and complaints management systems, and strengthened community representation mechanisms, thereby promoting transparency, accountability, and evidence-based decision-making.*
5) *Strengthen the capacity of the Wajir County Public Service through targeted professional development, leadership training, digital skills enhancement, and performance-based learning programmes to accelerate the effective delivery of the Wajir Transformation Agenda 2027–2032.*
6) *Institutionalise a structured framework for stakeholder engagement and partnership to strengthen collaboration with development agencies, the private sector, academia, and civil society, thereby enhancing resource mobilisation, policy implementation, and sustainable development outcomes across Wajir County.*

13·0

Implementation Framework

The Agenda will be implemented through transparent prioritisation, deliberate sequencing, sustainable financing, integrated value-chain delivery and a results-driven accountability system. Commitments will be translated into programmes and projects through the County Integrated Development Plan, annual development plans, approved budgets and departmental workplans. Public participation is a prerequisite to identifying and prioritising projects, while technical appraisal, lawful mandates and financial approval determine their readiness for implementation.

1. PRIORITIZATION: PUBLIC PARTICIPATION BEFORE PROJECT SELECTION

The County will maintain one consolidated pipeline of proposed investments across the twelve sectors. At ward, sub-county and county levels, residents will identify needs and rank priorities through accessible, documented public participation, with deliberate inclusion of women, youth, persons with disabilities, pastoral communities and underserved settlements. A published scoring framework will then assess urgency, poverty reduction, livelihood and employment impact, geographic equity, climate resilience, feasibility, value for money and lifecycle affordability. The County will publish a prioritisation report showing proposals received, decisions made and reasons for selection or deferral. Community endorsement will not replace statutory approvals or technical assessment.

2. SEQUENCING: START NOW, DELIVER IN REALISTIC PHASES

Quick wins (0–6 months) will focus on service restoration, disease surveillance, maintenance, project preparation and verification of pending bills. Short-term actions (6–18 months) will scale practical interventions such as water-point rehabilitation, livestock services, enterprise support and targeted digital systems. Medium-term programmes (18–36 months) will develop viable processing, aggregation, urban services and institutional upgrades. Long-term investments (3–5 years and beyond) will include major water infrastructure, industrial facilities and transformative connectivity, subject to feasibility, approvals and financing. Preparatory work on long-gestation investments will begin early.

Delivery Timeline	Course of Action
Quick wins | 0–6 months	Verify and prioritise pending bills; repair non-functional water and health assets; restore medicine and essential-supply availability; update asset and project registers; establish programme baselines and coordination mechanisms.
Short term | 6–18 months	Rehabilitate boreholes and water pans; strengthen veterinary outreach, fodder systems and community health; support ECDE and village-level enterprises; improve markets, revenue systems and service delivery.
Medium term | 18–36 months	Scale livestock aggregation and processing, irrigation and cold chains; upgrade priority county health facilities; develop spatial and urban plans; expand county roads, local markets and vocational training.
Long term | 3–5 years and beyond	Complete feasible flagship investments in referral services, water security, urban systems, renewable-energy partnerships and industrial value addition, subject to funding, approvals and operating capacity.

3. FINANCING: FISCAL DISCIPLINE AND CREDIBLE RESOURCE MOBILISATION

Projects will be financed within realistic revenue forecasts, approved expenditure ceilings and the County's capacity to meet recurrent costs, operations and maintenance. Verified pending bills will be addressed through a transparent, affordable clearance plan and stronger commitment controls. Own-source revenue administration will be improved fairly and lawfully. Conditional grants, climate finance and development-partner resources will be aligned with county plans and budgets. Private investment and public–private partnerships will proceed only after appraisal of affordability, value for money, risks and required approvals.

4. DELIVERY: COORDINATED VALUE CHAINS WITHIN COUNTY MANDATES

To the extent possible, the identification, prioritization and implementation of Flagship development projects shall adopt an integrated, whole-of-Government approach, ensuring that interventions across sectors and departments are complementary, mutually reinforcing and aligned towards common development outcomes. This approach will promote coordinated planning, optimal resource allocation, institutional collaboration and the elimination of duplication and fragmentation of development investments. Priority programmes shall be designed to maximize synergies across sectors, strengthen economic value chains and enhance the overall impact of public investments. Each programme shall have a designated lead department, clearly defined roles for collaborating institutions, a costed implementation plan, measurable milestones and an integrated results framework. Implementation shall be undertaken within the respective mandates of the County Government, while interventions requiring National Government involvement shall be pursued through appropriate intergovernmental coordination mechanisms, partnerships and joint implementation arrangements.

5. MONITORING, EVALUATION, LEARNING AND PUBLIC ACCOUNTABILITY

An integrated County Monitoring, Evaluation and Learning (MEL) Framework will be developed alongside the implementation matrix and embedded in annual planning and budgeting. Each programme and project will have a results chain (inputs, activities, outputs, outcomes and intended impact), a verified baseline, disaggregated targets, geographic coverage, budget, delivery milestones, data source, reporting frequency and named accountable officer. Indicators will cover service access and quality, completion and functionality, beneficiary reach, inclusion, climate resilience, jobs and livelihoods, value for money and citizen satisfaction. Baselines not yet available will be established before targets are finalised; outcome claims will not be inferred solely from expenditure or completion.

Departments will maintain project registers and submit monthly milestone and financial updates to the county planning/M&E function, which will consolidate quarterly performance dashboards, undertake data-quality checks and coordinate field verification. The County Treasury will reconcile physical progress with commitments, disbursements and expenditure. Quarterly executive reviews will identify delays, assign corrective actions and track closure; public-facing summaries and ward feedback sessions will communicate results and explain material changes to priorities. Annual performance reviews will inform the next ADP and budget; a mid-term evaluation will test relevance, effectiveness, efficiency, equity and sustainability, while an end-term evaluation will assess outcomes and lessons for the successor agenda. Independent audit, Assembly oversight and citizen complaints mechanisms will complement routine monitoring.

6. GOVERNOR'S DELIVERY UNIT: ACCELERATE DELIVERY.

A Governor's Delivery Unit (GDU) will complement the county planning/M&E function, Treasury or implementing departments. Operating under the Governor's executive coordination arrangements, it will track a limited portfolio of high-priority, publicly prioritised flagship commitments; maintain a milestone-based delivery tracker; convene rapid problem-solving with accountable departments; escalate cross-sector bottlenecks and decisions; and follow up corrective actions. It will draw verified performance data from departmental and county M&E systems rather than establish a competing reporting channel. Procurement, expenditure authority, project management and technical certification will remain with legally responsible institutions.

The GDU will issue a concise monthly exception report on delayed milestones, funding gaps, interagency dependencies and decisions required. Quarterly Governor-led delivery reviews will consider the GDU exception report alongside the county M&E dashboard, financial execution and citizen feedback. Performance findings will feed into annual planning, budget reprioritisation and public reporting, subject to established approval and participation procedures.

DELIVERY AND ACCOUNTABILITY ARCHITECTURE

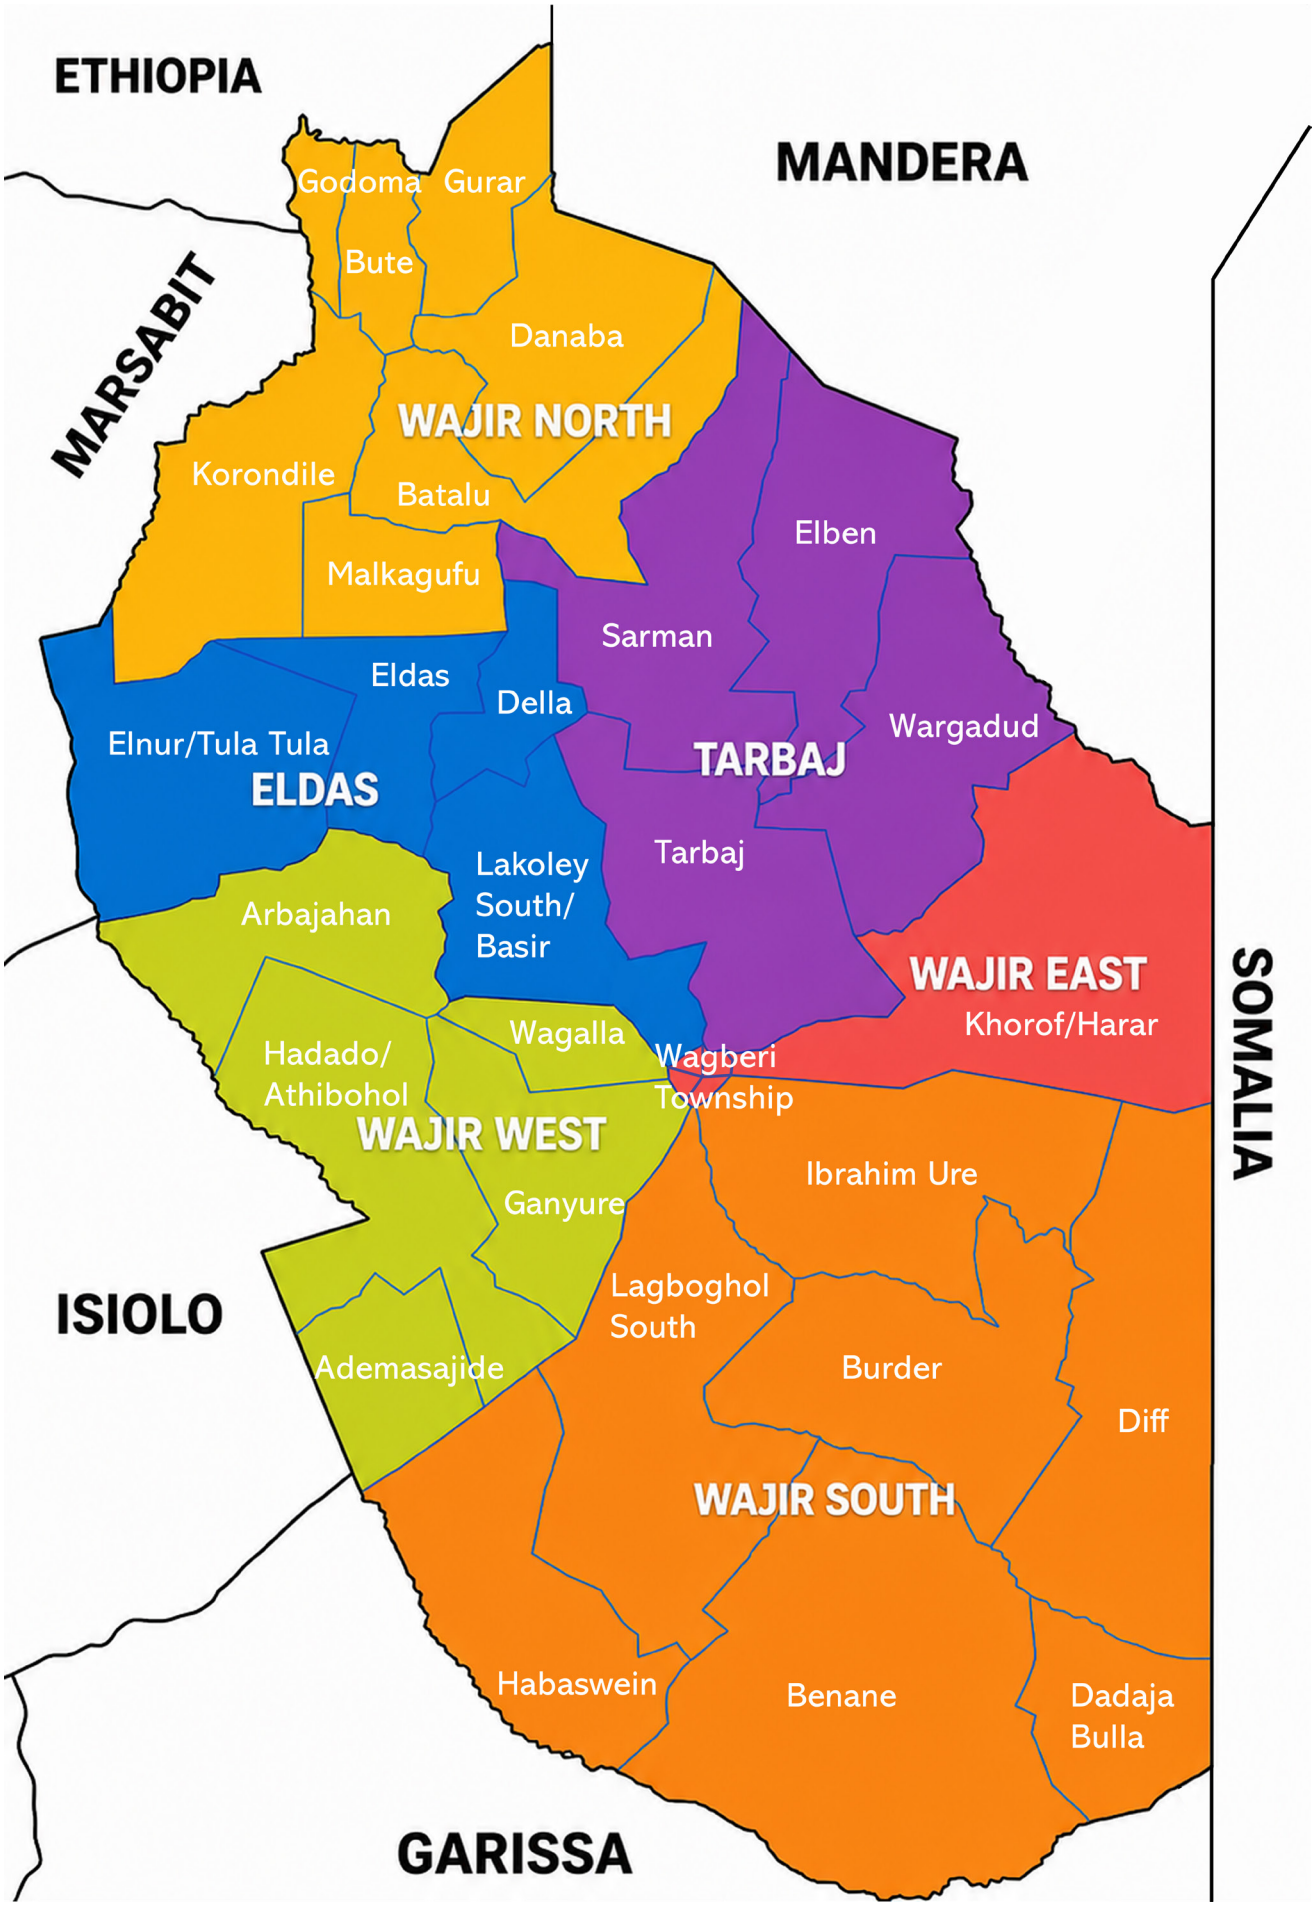

Function	Lead responsibility	Core Role/ Mandate
Implementation	Sector Departments and Agencies	Monthly milestones; project records; corrective actions
M&E and learning	County planning/M&E function	Verified quarterly dashboard; annual and periodic evaluations
Fiscal oversight	County Treasury	Quarterly budget execution and affordability checks
Delivery acceleration	Governor's Delivery Unit	Monthly exception report; quarterly flagship review
Public accountability	Public participation function, departments and Assembly	Participation records, accessible feedback, oversight and public reports
